2. Select the Wireless Networks tab. If it is missing, do:
   a. Click the Start button.
   b. Click on Control Panel.
   c. Make sure you are in Classic View.
   d. Open Administrative Tools.
   e. Open Services.
   f. Scroll to the bottom and double click Wireless Zero Configuration.
   g. In the pop up menu, select Automatic.
   h. Click the Start button in this dialog box
   i. Click OK.

3. Click to place a check mark in the box next to ‘Use Windows to configure my wireless network settings’

4. If networks other than ‘Cavalier’ appear on this list, make sure that you are connecting to ‘Cavalier’

5. Click the Advanced button at the bottom
   a. Select Access point (infrastructure) networks only
   b. Click Close

6. Under Preferred networks, click Add... (depending on the card you will most likely see one of the two screens below, on the left screen use the arrows to the right of the blocks to choose options.)
   a. Type cavalier for the SSID
   b. Click the Authentication tab
   c. Click the Properties button
   d. In the Trusted Root Certificate Authorities scroll list check the box next to Education and Research Client CA

Check the Preferred networks section of the connection properties box and use the Move Down button to put wahoo below cavalier on the list.
   d. Click OK
   e. At this point Windows will attempt to establish a connection. If you are in an area where only the wahoo network is available your system may connect automatically, or you may be prompted with popup to choose a wireless network and approve its use as an unsecured network. If you are in range of the cavalier network you will need finish to your connection as follows:
   f. After a few moments a pop-up may appear from the System Tray “Click here to...”
   g. Click anywhere on the pop-up (not the X!).
   h. If you have more than one Certificate you will be prompted to pick one to use.

Older certificates that will not work will show your name. Newer certificates (ones issued after 1/8/04) show your email address instead of your name. Only the newer certificates (with your email address) will connect you to the cavalier wireless network so choose that one to use.

i. You should now be connected.

j. Note: Subsequent connections should occur without any user interaction

8. If you are still unable to get your wireless connection working, please call the ITC Help Desk at 924-3731 for assistance in troubleshooting your wireless connection.
